The invention relates to an isolated nucleic acid molecule comprising a polymucleotide that encodes a polypeptide or peptide, or its variants that specifically binds to at least a portion of an inhibitor of appropriate comprising at least an N terminus sequence of caspase-9 wherefinal links as least a portion of a procaspase-9 wherefinally binds at least a portion of a procaspase-9 where the peptide or polypeptide containing a mutated active site, where the peptide or polypeptide exhibits caspase-3 may make the peptide or polypeptide exhibits caspase-3 may make a portion of aspase-3, where the peptide or polypeptide exhibits caspase-3 may make the peptide or polypeptide exhibits caspase-3 may make the peptide or polypeptide exhibits caspase-3 may make a portion of a mutated or polypeptide exhibits caspase-3 may make a portion of a mutated or polypeptide exhibits caspase-3 may make a mortion of a mutated corporation or at least a portion of a mutated corporation or at least a portion of a mutated corporation or at least a portion of a mutated corporation or at least a portion of a mutated corporation or at least a portion of a mutated corporation or at least a portion of a mutated corporation or activity, a nucleic acid molecule comprising an opticion or polypeptide, an antibody that specifically binds to corporating the expression vector, an antibody that specifically binds to the peptide or polypeptide, an antibody that specifically binds to corporate located on the N-terminus of a caspase-9-pl2, inducing apoptosis in a cell or stimulating apoptosis in a neoplastic or tumour cell, and a cell or stimulating apoptosis in a neoplastic or tumour cell, and a process for the manufacture of a compound for inhibiting or enhancing apoptosis or cenhancer of caspase-mediated apoptosis. Colentifying a compound for inhibiting or enhancing apoptosis in a cell. The nucleic acid molecules and peptides are useful for inducing apoptosis and identifying a compound for inhibiting or enhancers of apoptosis for treating and peptide

A gene delivery vehicle comprising a rev-caspase coding sequence is useful for the treatment of cancer, where the gene delivery vehicle is internalised by tumour cells. The gene delivery vehicle is internalised by tumour cells. The gene delivery vehicle can also be used to treat autoimmune diseases. Cells transfected with a rev-caspase expressing vector can be used in identification of inhibitors or enhancers of caspase-mediated apoptosis. In vitro translated rev-caspase can be used to identify an inhibitor or enhancer of caspase processing activity. Caspase inhibitors are useful for treating neurodegenerative diseases as well as for inhibiting apoptosis in the heart following myocardial infarction. New rev-caspases engineered to contain the small subunit fused in frame N -terminal to the large subunit, which is in reverse order to the wild type caspases, are useful to treat cancer and autoimmune diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention provides the protein and coding sequences of human rev-caspases-3, uncleavable rev-caspase-3 and rev-caspase-6. The sequences can be used in the gene therapy of cancer and autoimmune diseases. The present sequence is a protein described in the exemplification of the

The present sequence represents a human Mch6 polypeptide. Mch6 is a ced-3 homologue, and is a member of the ICE (interleukin-1-beta converting enzyme) family of aspartate-specific cysteine proteases (ASCRS). The specification describes a method for identifying mammalian Mch6 activity medulators (inhibitors or enhancers). The compounds identified by the method are useful as pharmaceuticals for treating or preventing diseases characterized by increased apoptotic cell death such as Alzheimer's characterized by increased apoptotic cell death sclerosis, retinitis disease, Parkinson's disease, amyotropic lateral sclerosis, retinitis aplastic anemia, ischemic injury including myocardial infarction, stroke and reperfusion injury. The compounds are also useful for treating can reperfusion injury. The compounds are also useful for treating consers, carcinomas and hormone dependent tumours such as breast, prostate and ovarian cancer. Increased cell survival or apoptosis inhibition also results in autoimmune diseases such as systemic lupus erythematosus and immune-mediated glomerulonephritis as well as viral

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       homologue 6) an aspartate-specific cysteine protease and the MCH6 polypeptide. The MCH6 collypeptide can be used to diagnose, treat (e.g. by gene therapy) or reduce the severity of cell death-mediated diseases (i.e. apoptotic) such as neurodegenerative diseases e.g. Alzheimer's disease, Parkinson's disease, amyotrophic lateral sclerosis, retinitis pigmentosa and cerebellar degeneration, and myelodysplastic syndromes, e.g. aplastic anaemia, ischaemic injury, myocardial infarction, stroke and reperfusion injury. The MCH6-encoding nucleic acids and polypeptides can also be used to diagnose or generate reagents to diagnose diseases mediated or characterised by programmed cell death. A purified recombinant MCH6 protein can be used to measure a continuous fluorometric assay. The present sequence represents human MCH6
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           121 LRPETPRPVDIGSGGFGDVGALESLRGNADLAYILSMEPCGHCLIINNVNFCRESGLRTR 180

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to an isolated gene encoding apoptic protease, mammalian ced-3 homologue 6 (Mch6). Mch6 is a member of the aspartate-specific cysteine protease (ASCP) family. Mch6 DNA and protein sequences are useful for modulating apoptosis for the therapeutic treatment of

human diseases. Mch6 sequences are useful for upregulating apoptosis (e.g. for treating cancers, autoimmune disease or viral infections) or downregulating apoptosis (e.g. for treating Alzheimer's disease. Parkinson's disease or cerebellar degeneration). The Mch6 sequence is useful for diagnosing, treating or reducing the severity of cell death-mediated diseases, as well as other diseases mediated by either increased or decreased programmed cell death. The present amino acid sequence is

```
ö
                                                      The present sequence represents a human apoptotic protease, designated Mch6. Mch6 is an aspartate-specific cysteine protease. Mch6 polypeptides and polymucleotides can be used to diagnose, treat or reduce the severity of cell death-mediated conditions, e.g. cancers, autoimmune diseases such as systemic lupus erythematosus, viral infections such as herpesvirus, degenerative disorders such as Alzheimer's disease and Parkinson's disease, myelodysplastic syndromes such as myocardial infarction and stroke. They can also be used to screen for compounds that inhibit or promote Mch6 mediated apoptosis
                                                                                                                                                                                                                                                                                                                                                                       120
                                                                                                                                                                                                                                                                                                                                                                                                                                    180

The invention relates to determining a prognosis for survival for a cancer patient. The method involves (a) measuring a level of a tumour upergulated CARD-containing antagonist of caspase-9 (TUCAN) in a neoplastic cell-containing sample to a reference level of TUCAN, where a low level of TUCAN in the sample correlates with increased survival of the patient. Alternatively, the method involves measuring levels of TUCAN and one or more biomarkers selected from the group of CLAP2, Apafl, BG1-2, or patient. Alternatively, the method involves measuring levels of TUCAN and one or more biomarkers selected from the group of CLAP2, Apafl, BG1-2, or cancer in a neoplastic cell-containing sample from the cancer patient. The method is useful for determining if the patient is at risk for relapse, or for determining a proper course of treatment for a patient with cancer. The method is also useful for monitoring the effectiveness of a course of treatment for a patient with cancer, e.g. colon cancer, gastrointestinal cancer, breast cancer, ovarian cancer, lung cancer, leukemia, CNS cancer, melanoma, prostate cancer, or renal cancer. The present sequence represents a human caspase-9 polypeptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      0

```
The invention relates to an isolated nucleic acid molecule comprising a polynucleotide that encodes a polypeptide or peptide, or its variants that specifically binds to at least a portion of an inhibitor of a poptiosis protein (IAP). Also included are a peptide or a polypeptide (comprising at least an N terminus sequence of caspase-9 where they are sequence, a first portion of a procaspase-9 that specifically binds at least a portion of an IAP and a second portion of a procaspase-9 containing a mutated active site, where the peptide or polypeptide specifically binds at least a portion of an IAP and lacks cysteine specifically binds at least a portion of an IAP and lacks cysteine specifically binds at least a portion of caspase-3, where the peptide or polypeptide exhibits caspase-3 enzymatic activity that is inhibited by an IAP or an IAP Bir3 domain) or at least a portion of a mutated type caspase-9, which fails to undergo normal processing and possesses wild type caspase-9, enzymatic activity, a nucleic acid molecule comprising a polymucleotide sequence that encodes the caspase-9 N-terminal linker), an expression vector comprising any of the nucleic acids, a host cell.
                                                                                                                                                                                                                                                                                               Human, caspase-9; anti-HIV; nootropic; neuroprotective; vasotropic; cytostatic; immunosuppressive; inhibitor of apoptosis protein; IAP; caspase-9 N-terminal linker; procespase-9; cysteline protease; caspase-3; Bir3 domain; apoptosis; AIDS; neurodegenerative disease; ischaemic injury; cancer; autoimmune disease; mutant; mutein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  containing the expression vector, an antibody that specifically binds to the peptide or polypeptide, an antibody that specifically binds to an

epitope located on the N-terminus of a caspase-9-pl2, inducing apoptosis in a cell or stimulating apoptosis in a meoplastic or tumour cell, identifying an inhibitor or enhance of caspase-mediated apoptosis, identifying a compound that inhibits the peptide or polypeptide, producing a compound for inhibiting or enhancing apoptosis in a cell, and a process for the manufacture of a compound for inhibiting or enhancing apoptosis in a cell. The nucleic acid molecules and peptides or enhancing apoptosis in a cell. The nucleic acid molecules and identifying inhibitors or enhancers of apoptosis for treating AIDS, neurodegenerative diseases, ischaemic injury, cancer, autoimmune diseases. The present sequence represents the caspase-9 protein mutated to ablate the autocatalytic cleavage site in the linker region. Note: the present sequence is not shown in the specification but was created by the indexer using the information in the claims and the wild type caspase-9 sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             300

The invention relates to an isolated nucleic acid molecule comprising a polynucleotide that encodes a polypeptide or peptide, or its variants that encodes a polypeptide or peptide, or its variants that specifically binds to at least a portion of an inhibitor of appropriate or polypeptide or polypeptide or polypeptide or interpretation of a procaspase-9 N-terminal links at least a portion of a procaspase-9 that specifically binds at least a portion of a procaspase-9 that specifically process ancatuing a mutated active site, where the peptide or polypeptide exhibits caspase-3 enzymmatic activity that is inhibited by procease activity, and at least a portion of caspase-3, where the peptide or polypeptide exhibits caspase-3 enzymmatic activity, and at least a portion of a mutated or procaspase-9, which fails coundergo normal processing and possesses wild type procession vector comprising any of the nucleic acid molecule comprising a polymucleotide sequence that encodes the caspase-9 N-terminal linker), and expression vector comprising any of the nucleic acids, a host cell containing the expression vector, an antibody that specifically binds to an epitope located on the N-terminus of a caspase-9p12, inducing apoptosis in a cell or stimularing apoptosis in a neoplastic or tumour cell, and a process for the manufacture of a compound for inhibiting or enhancing apoptosis in a cell. The manufacture of a compound for inhibiting or enhancing apoptosis in a cell. The manufacture of a compound for inhibiting or enhancing apoptosis in a cell. The manufacture of a compound for inhibiting or enhancing apoptosis in a cell, and a poptosis and identifying a compound for inhibiting or enhancing apoptosis and peptides or polypeptides are useful for inducing apoptosis and peptides or polypeptides are useful for inducing a compound for inhibiting or enhancing or enhancers of apoptosis for treating AlbS, neurodegenerative diseases, is character and enhancers of apoptosis for treating AlbS, neurodegenerative in the linker region. Note:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     DLETRGSQALPLFISCLEDTGQDMLASFLRTNRQAGKLSKPTLENLTPVVLRPEIRKPEV 120

```

The invention relates to an isolated nucleic acid molecule comprising polynucleotide that encodes a polypeptide or peptide, or its variants that specifically binds to at least a portion of an inhibitor of approprisis protein (IAP). Also included are a peptide or a polypeptide (comprising at least an N terminus sequence of caspase-9 N-terminal linker sequence, a first portion of a procaspase-9 that specifically

```
binds at least a portion of an IAP and a second portion of a procaspase-9 containing a mutated active site, where the peptide or polypeptide specifically binds at least a portion of an IAP and lacks cysteine protease activity, and at least a portion of caspase-3, where the peptide protease activity, and at least a portion of a mutated or IAP bir3 domain) or at least a portion of a mutated or procaspase-9, which fails to undergo normal processing and possesses wild procaspase-9, which fails to undergo normal processing and possesses wild cype caspase-9 enzymatic activity, a nucleic acid molecule comprising a colymodicetide sequence that encodes the caspase-9 host cell containing the expression vector, an antibody that specifically binds to containing the expression vector, an antibody that specifically binds to containing the expression vector, an antibody that specifically binds to be peptide or polypeptide, an antibody that specifically binds to contain the N-terminus of a caspase-9-pil; inducing apoptosis in a cell or stimulating apoptosis in a neoplastic or tumour cell, and chentifying a nihibitor or enhancer of caspase-mediated apoptosis, identifying a compound for inhibitis the peptide or polypeptide, or producing a compound for inhibiting or enhancing apoptosis in a cell. An underly apoptosis in a cell. The nucleic acid molecules and peptides or enhancing apoptosis and identifying inhibitors or enhancers of apoptosis for treating AIDS, neurodeserve in treating AIDS, neurodeserve in treating AIDS, neurodeserve in treating AIDS, neurodeserve in treating AIDS, neurodeserve in treating AIDS, neurodeserve in treating AIDS, neurodeserve in treating AIDS, neurodeserve in treating AIDS, neurodeserve in treating AIDS, neurodeserve in treating AIDS, neurodeserve in treating AIDS, neurodeserve in the intervent in the intervent in the intervent intervention and identifying or enhancing and identifying or enhancers of apoptosis for treating AIDS, neurodeserve in the intervention and identifying and interventing and id
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ischaemic injury, cancer, autoimmune diseases. The present sequence represents the caspase-9 protein mutated to ablate the autocatalytic cleavage site in the linker region. Note: the present sequence is not shown in the specification but was created by the indexer using the information in the claims and the wild type caspase-9 sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  1 MDEADRRLLRRCRLRLVEELQVDQLWDALLSRELFRPHMIEDIQRAGSGSRRDQARQLII

Patent No. 6010878
GENERAL INFORMATION:
APPLICANT: DIXIT, VISHVA M.
APPLICANT: HE, WALL WU
APPLICANT: KIKLY, KRISTINE K.
APPLICANT: RIBEN, STEVEN M.
TITLE OF INVENTION: INTERLEUKIN-1 BETA CONVERTING
TITLE OF INVENTION: ENZYME LIKE APOPTOTIC PROTEASE-6
NUMBER OF SEQUENCES: 11
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             COMPUTER READBLE FORM:

Patent No. 6087150
GENERAL INFORMATION:
APPLICANT: He, Wei-Wu et al.
TITLE OF INVENTION: Interleukin-1 Beta Converting Enzyme
TITLE OF INVENTION: Like Apoptosis Protease 3 and 4
NUMBER OF SEQUENCES: 12
CORRESPONDENCE ADDRESS:
ADDRESSEE: Human Genome Sciences, Inc.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     90; Indels
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ZIP: 20850
